

Juan Ceja

Software Engineer

661-778-8790 | JuanCejaSWE@yahoo.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | San Francisco Bay Area | Open to Relocation

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, SQL, HTML/CSS

Backend: FastAPI, SQLAlchemy, Alembic, REST APIs, JWT Authentication, PostgreSQL, MySQL

Frontend: React, Vite, Tailwind CSS, React Router, Axios, Next.js

AI/ML: Anthropic SDK (Claude API), LLM Integration, Prompt Engineering

Tools & Infra: Git, AWS, Render, Vercel, Stripe API, APScheduler

Concepts: Database Design, ORM, Dependency Injection, RBAC, Automated Job Scheduling

PROJECTS

WagerInsights | *FastAPI, PostgreSQL, React, Anthropic Claude API, Stripe*

[wagerinsights.app](#)

- Architected and deployed a full-stack sports betting analytics platform from scratch, with a FastAPI/PostgreSQL backend and React/Vite frontend, live in production on Render and Vercel
- Built secure JWT authentication with refresh tokens and role-based access control (RBAC), protecting admin routes via a database-backed permissions layer
- Integrated the Anthropic Claude API to generate AI-powered bet analysis, and the Stripe API to handle deposit transactions in a PCI-compliant flow
- Automated odds syncing and bet settlement using APScheduler background jobs, syncing live data from The Odds API every 12 hours and settling bets hourly
- Designed a normalized relational schema with SQLAlchemy ORM and Alembic migrations, modeling users, bets, games, and transactions

JC SoleShop | *React, Next.js, Stripe API*

[Live Demo](#)

- Built a full e-commerce storefront with Stripe payment processing for secure checkout, product management, and transaction handling
- Implemented server-side rendering and static generation with Next.js to optimize page performance and SEO

CejaFit | *React, Material UI, RapidAPI*

[Live Demo](#)

- Developed a responsive workout platform integrating multiple RapidAPI sources to fetch and display exercise data
- Built reusable React components with custom hooks for state management and a clean, component-driven UI

EXPERIENCE

Gas Technician

2021 – Present

California Bioenergy (CalBio)

Tulare, CA

- Co-manage operations for the largest cluster of anaerobic digesters in the nation, monitoring and optimizing automated control systems (SCADA) to maintain 96%+ uptime across critical infrastructure
- Analyze real-time sensor and performance data to diagnose issues and optimize gas purity, recovery, and efficiency across a large-scale distributed system
- Author detailed technical documentation and operational procedures, ensuring regulatory compliance and data integrity, and train team members on systems and protocols
- Promoted into an expanded operations role based on technical performance and systems expertise

EDUCATION

Western Governors University

Graduated November 2025

Bachelor of Science, Software Engineering

Coding Dojo

2022

Full Stack Web Development Certificate

CERTIFICATIONS

AWS Certified Cloud Practitioner

Issued Aug 2024 – Valid through Aug 2027

Amazon Web Services
